Dashboard license is now perpetual

Author

Weintek's cloud-based Dashboard monitoring system allows users to monitor and manage selected HMI data in real time via a PC or mobile device web browser – anytime, anywhere!

Previously, this service offered an annual subscription of 500 tags per year. The subscription is now perpetual, providing users with 100 tags and 20 historical tags. For larger systems, the number of tags can be increased using an expansion card. Each time the expansion card is used, an additional 50 tags and 10 historical tags become available. For each dashboard, the maximum possible number of tags is 500, and historical tags are 100.

	Period	Number of tags per HMI	Number of historical tags* per HMI
Dashboard Activation Card	Unlimited	100	20
Available with service activation EasyAccess 2.0**	Lifetime	20	0
Tag Refill Card	Lifetime	50 per card	10 per card
Trial Period***	90 days	100	20

* Historical tag values can be stored on the server for one year. Backups of these values can be downloaded in *.csv format no more than 10 times per day. The dashboard itself has widgets for displaying historical tag values, such as a trend and table.
** Activating the EasyAccess 2.0 remote access service also adds 20 tags to the dashboard, allowing you to use them in the dashboard. No additional activation of the Dashboard service is required.
*** The trial period can only be activated once for each HMI.

What are the features of the Dashboard service?

- Data visualization on a single web page from multiple HMIs;
- Easy visualization customization using built-in widgets without writing code;
- Ability to both read and write HMI tags;
- Event archiving to a log;
- Archiving of historical tag values;
- Supported by all cMT X series panels.

How do I activate Dashboard?

Activation and interaction with the service is done through the Weincloud website, where you must

create your own domain.
